CFL lock-e

CFL Lock-e, an internally developed solution by CFL multimodal, seamlessly merges rail expertise and safety research into a system that integrates both physical and digital elements. It enhances control over semi-trailer loading on rail by incorporating advanced light modules and IoT devices.

Noteworthy strengths of CFL Lock-e include delivering instant information for control personnel and fostering information sharing among stakeholders through a user-friendly platform. With patented technology, CFL Lock-e represents a successful "phygital solution," skillfully combining rail expertise with technology to elevate safety standards in the industry.
